Motivated and dedicated individual seeking a career in the IT industry, specifically in software development. Known for being a quick learner with strong teamwork abilities, flexibility, and a high level of responsibility. Committed to continuous growth and delivering quality results in a collaborative environment.

My technical skills include:
- Proficiency in Ruby on Rails, including its ecosystem of gems and tools.
- Experience with front-end technologies such as HTML, CSS, and JavaScript frameworks.
- Expertise in transforming UI/UX concepts into functional website designs.
- Expertise in database management and optimization with SQL and NoSQL databases.
- Knowledge of version control systems like Git for collaborative development.
- Strong problem-solving abilities and a commitment to writing clean, maintainable code.

WORK EXPERIENCE/S:

Developer   **Freelancer**   **Nov 2024 – Present**

Designed and developed custom websites for small businesses and personal clients, handling both front-end and back-end tasks.

Features:
- Designed, developed, and maintained custom websites for small businesses and individual clients.

Senior Software Engineer   **Ascenda Loyalty**   **June 2018 – Oct 2024**

I successfully built and maintained a complex booking platform that included a user-friendly front end and a powerful admin panel. This experience honed my skills in full stack development and taught me how to tackle challenges related to scalability, performance, and user experience. I am particularly proud of my ability to create solutions that not only meet client requirements but also anticipate their future needs.

Projects:
- Travel Loyalty Platform
- Integration with Vervotech to centralized the hotel data from one supplier
- UAT Environment Setup: Setup the User Acceptance Testing (UAT) environment to ensure smooth testing and validation of software features before production release.
- Scrum Master: Experience facilitating the daily stand-ups, sprint planning, retrospectives, and ensured the team adhered to agile principles for timely and efficient project delivery.
- Team Event Organizer: Coordinated and organized team-building events to foster collaboration, morale, and engagement within the team.
- Client Support (Travel Bookings): Provided end-to-end support for client requests related to hotel, car, and flight bookings, ensuring seamless service and meeting client expectations.
- Documentation using Notion
- Mentor Jr Software Engineers & Interns

Features
- Enhance the existing features such hotel bookings, cars, flights

- Update and create new website for clients
- Kaligo.com – a booking website (hotels)
- Clients booking website (hotels, cars, flights)
- Inventory of hotels, cars, flights
- Enhancement of legacy travel platform
- Maintenance base on clients request
- Ascenda, an internal website for all employees that handles the points

Software Engineer   **inDinero, Inc.**   **March 2014 – May 2018**

I'm working as a full stack developer using Ruby on Rails, where we're building and maintaining an accounting, payroll, and tax software product. My responsibilities include developing new features, fixing bugs, and performing code refactoring. Additionally, I've been assigned the role of build master, which involves merging and deploying features to production. I also contribute to estimating the effort required for new features. We have daily stand-ups, and our team holds sprint planning and retrospective sessions twice a month.

Projects:
- inDinero Product – Accounting, Payroll and Tax Software

Features
- Enhance the existing features such as invoices, bills, ar/ap report, tax questionnaire, ui redesign
- Added new features such as team member settings, enter payment, Stitch API, Plaid API, inDinero API, Opsgenie API
- inDinero API documentation using slate

Web Developer   **Tooch, Inc.**   **June 2013 – March 2014**

Responsible for developing web-based projects to meet client requests and needs. Convert PSD files into fully functional websites. Enhance and modify existing systems. Design, create, and implement database schemas for various projects.

Projects:
- Ruby on Rails – WhistleBlower
- PHP – Virtual Medical Communication
- PHP – Premier Horizon

Junior Software Engineer   **Myportal Exchange, Inc.**   **April 2012 – June 2013**

Responsible for developing web-based projects to meet client requirements and needs. Convert PSD files into responsive websites. Modify and enhance existing systems. Design, create, and implement database schemas for various projects.

Projects:
- Php Instructor for 5 days at GMA Network (IT Department)
- Email blasting using the Email Message Management System of the company
- Web Maintenance for dsaph (cakePhp)
- Web Maintenance for clear-channels (wordpress)
- Flash for presentation and for website
- Content Writer of the website
- Making website manuals

On the Job Trainee Smart Tel, Inc.   Bacalso Avenue, Cebu City   April – May 2011

Tasked to backup tape using Veritas Tool on the server, make reports and monitor the system.

EDUCATIONAL ATTAINMENT:

Bachelor of Science in Computer Science

Thesis: Xavier University - Ateneo de Cagayan Corrales Ave., Cagayan de Oro City, March 2012

Augmenting Student and Teacher Interaction Through Mobile Device 2011 – 2012
　　　Modified the existing module with database enhancements. The module, originally built in Java, serves as the platform for interaction between students and teachers. It allows teachers to log in, while students can submit their questions via the website, Bluetooth, and an Android application.
